

## Zone Pressurisation test:

Each level tested as fire affected floor

Pressure differential tested between fire affected compartment (level) above & below  
So nominally 20Pa differential

## Stairs Test:

Final exit fully open

Activated - in fire mode

All tested compartment doors open

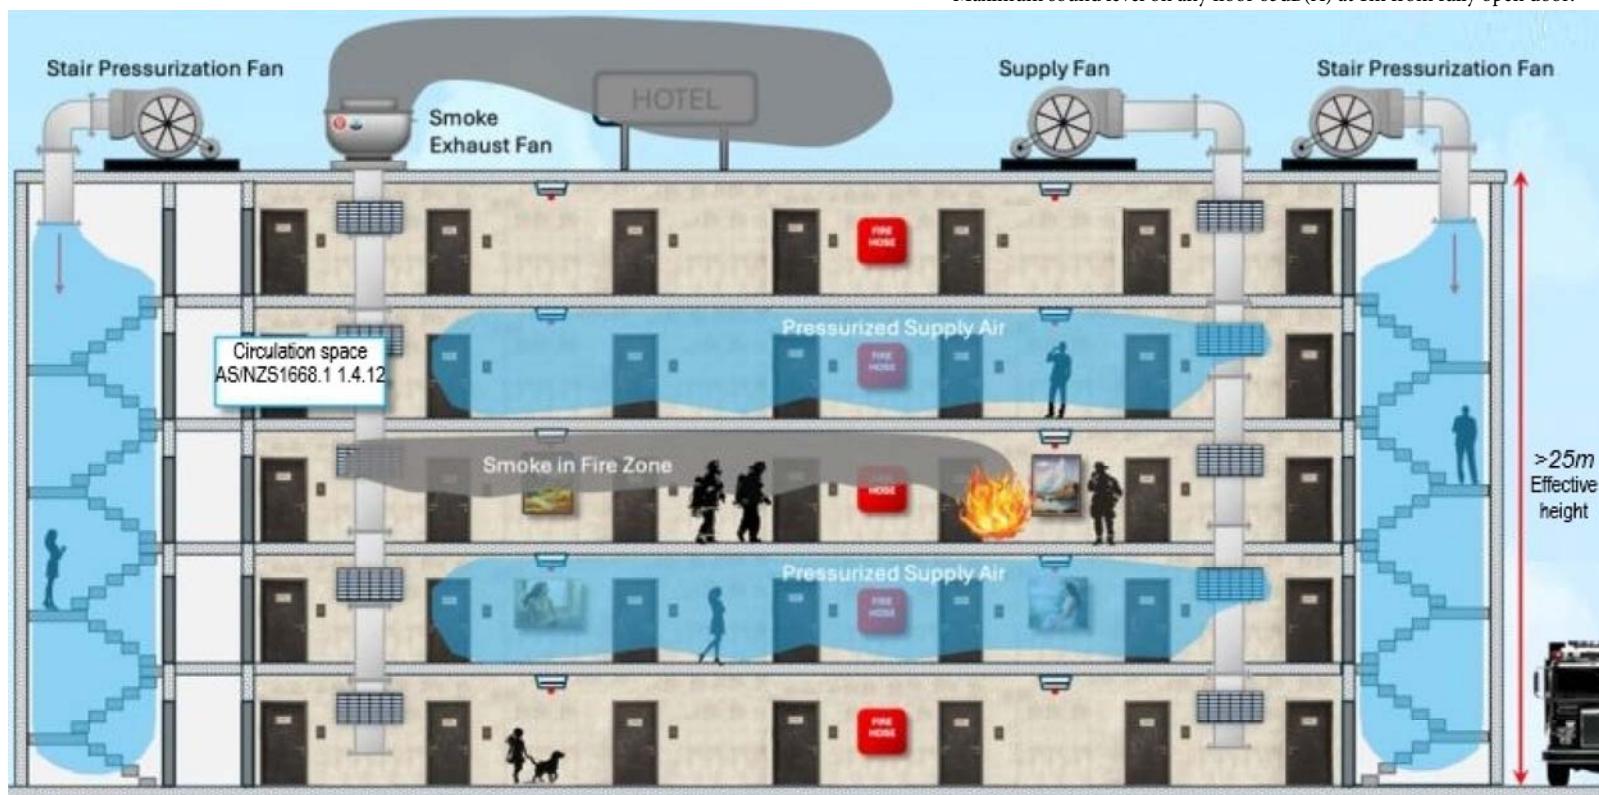

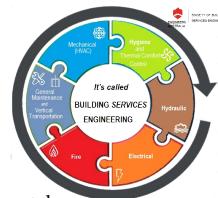

other stair doors 1 above & 1 below where possible

Average 1m/s through tested door fully open door portal

With all stairwell doors shut - maximum 110N door opening force

Maximum sound level in stairwell of 80dB(A)

Maximum sound level on any floor 65dB(A) at 1m from fully open door.

**IF YOU'RE  
NOT SURE  
HOW TO DO IT  
DON'T DO IT...  
**ASK!****

**Zone Smoke Control AS/NZS 1668.1:2015 Section 8**  
See AS1851-2012 Sect.13.4 for service & test requirements
